

**1. Which machine did you choose?**

I installed ubuntu 18.04 on my personal computer

**2. Which manual page did you read? Did you learn anything useful?**

I read the "intro 1" page. It mainly helped me review most of the commands. Commands like "cat" and "grep" are ones I use, but I never learned exactly their definitions were until now.

**3. Which editor did you choose? Why? (Some people feel very strongly about their editors. . . )**

I am using Vim because I feel more comfortable about using Vim than Emacs.

**4. Please include a copy of your program in this submission. Did you encounter any problems while developing it? If so, what were they and how did you solve them?**

The program wise, I only ran into syntax errors because I need to get familiar with vim. I solved them by just double checking my code. I had way more trouble getting ubuntu set up.
